**COMPLETE LISTING OF CLAIMS** 

IN ASCENDING ORDER WITH STATUS INDICATOR

Claim 1 (currently amended): A method for editing performance data using a computer

system having a display, said method comprising the steps of:

controlling the computer system to display a plurality of layers on a screen of the display,

wherein each of said plurality of layers corresponds to a different musical performance editing

function;

providing a display instruction for controlling the display setting of at least one of said

plurality of layers, said display setting being one of display mode and non-display mode;

in response to the display instruction, controlling the computer system to place at least

one of the layers in a display mode or a non-display mode; and

in response to a user instruction, attaching an execution icon at a prescribed position onto

one of said plurality of layers in at least one layer that is displayed on the screen of the display,

said execution icon corresponding to execution-related data representing articulation used in

musical performance,

wherein the execution-related data of the attached execution icon is related to the editing

function of the layer to which the execution icon is attached, and

wherein said step of attaching the execution icon causes the corresponding execution-

related data to be incorporated into the performance data being edited.

Claims 2-13 (canceled)

3

Serial No. 09/666,364 Docket No. 393032019700

la-812834

Claim 14 (currently amended): A performance data editing apparatus for editing performance data, said apparatus comprising:

a display;

a receiver for receiving executable instructions, said executable instructions including display instructions for controlling a display setting of at least one of a plurality of layers, said display setting being one of display mode and non-display mode, and user instructions for attaching an execution icon, said execution icon corresponding to execution-related data representing articulation used in musical performance; and

a controller for controlling the display or non-display of at least one of the layers on a screen of display in response to the received display instructions, and for controlling to display the execution icon at a prescribed position onto one of the displayed layers in at least one layer that is displayed on the screen of the display in response to the received user instructions,

wherein each of said plurality of layers corresponds to a different musical performance editing function,

wherein the execution-related data of the attached execution icon is related to the editing function of the layer to which the execution icon is attached, and

wherein the controller causes the execution-related data corresponding to the attached execution icon to be incorporated into the performance data being edited.

Claims 15-19 (canceled)

Claim 20 (currently amended): A machine-readable media containing an executable program for causing a computer system to perform a method for editing performance data, said computer system having a display, said method comprising the steps of:

controlling the computer system to display a plurality of layers on a screen of the display, wherein each of said plurality of layers corresponds to a different musical performance editing function;

providing a display instruction for controlling the display setting of at least one of said plurality of layers, said display setting being one of display mode and non-display mode;

in response to the display instruction, controlling the computer system to place at least one of the layers in a display mode or a non-display mode; and

in response to a user instruction, attaching an execution icon at a prescribed position onto one of said plurality of layers in at least one layer that is displayed on the screen of the display, said execution icon corresponding to execution-related data representing articulation used in musical performance,

wherein the execution-related data of the attached execution icon is related to the editing function of the layer to which the execution icon is attached, and

wherein said step of attaching the execution icon causes the corresponding executionrelated data to be incorporated into the performance data being edited.

Claims 21-25 (canceled)

Claim 26 (previously presented): The performance data editing method of claim 1, wherein the prescribed position in the at least one layer, to which the execution icon is attached,

is determined in correspondence with progression of the performance data.

Claim 27 (previously presented): The performance data editing method of claim 1,

wherein each layer is displayed as an execution icon layer in correspondence with the execution-

related data.

Claim 28 (previously presented): The performance data editing method of claim 27,

wherein the execution icon layer contains at least one of a tempo icon layer, a dynamics icon

layer, a joint icon layer, a modulation icon layer, an accent icon layer, an attack icon layer, and a

release icon layer.

Claim 29 (previously presented): The performance data editing method of claim 1,

further comprising the step of controlling the computer system to display a name of at least one

of the plurality of layers.

Claim 30 (previously presented): The performance data editing method of claim 1,

further comprising the step of controlling the computer system to further display an operator for

controlling at least one of the plurality of layers displayed on the screen of the display.

Claims 31-32. (canceled)

6

Serial No. 09/666,364 Docket No. 393032019700 Claim 33 (previously presented): The method of claim 1, further comprising the steps of: editing the execution icon attached onto one of said plurality of layers; and editing the performance data corresponding to the execution icon that is edited.

Claim 34 (previously presented): The performance data editing method of claim 1, wherein a musical score is displayed on the screen of the display so that the plurality of layers are displayed in relation to the musical score.

Claim 35 (previously presented): The performance data editing method of claim 34, further comprising the steps of:

in response to the user instruction, selecting or editing the execution icon attached to the layer; and

visually displaying a prescribed range of execution-related data corresponding to the execution icon that is selected or edited on the musical score.
